

Aerial Forestry Fertilisation

**BOOK NOW
FOR 2012**

Maximise Your Return On Investment

Aerial fertilisation is normally carried out between April and August.

Spraying Licence issued by the Forest Service. Samples to be taken to determine type & application rate of fertiliser required.

WHEN TO SAMPLE

- CONIFERS: dormant season - End of Nov. to end of Jan.
- BROADLEAVES AND DECIDUOUS CONIFERS: Summer (usually August) after shoot growth
